Abstract—This is the abstract. It must be a single paragraph and between 150 to 250 words. All variables should appear lightface italic; numbers and units will remain bold. In order for an Abstract to be effective when displayed on IEEE Xplore, it must be an accurate, standalone reflection of the contents of the article. They shall not contain numbered mathematical equations, numbered reference citations, nor footnotes.

Index Terms—Keyword1, Keyword2, Keyword3, Keyword4.

NOMENCLATURE

V_{DS} Drain-to-source voltage.
 I_D Drain current.
 V_{GS} Gate-to-source voltage.

I. INTRODUCTION

In full-length articles, the first letter of the Introduction is set as an initial cap, two lines deep (drop cap). After the cap, the remaining characters of the word are capitalized, as well as another 1–2 words at most.

THIS document is a template for an IEEE style thesis. Standard specifications have been established for Transactions text section headings. There are four levels of section headings with established specs: primary (section), secondary (subsection), tertiary (subsubsection), and quaternary (paragraph) heads.

Primary headings are enumerated by Roman numerals, centered above text, and set in small caps.

A. Secondary Headings

Secondary headings are enumerated by capital letters followed by periods (“A.,” “B.,” etc.), flush left, italic, upper and lowercase.

1) *Tertiary Headings*: Tertiary headings are enumerated by Arabic numerals followed by parentheses. They are indented one em, run into the text in their sections, italic, upper and lowercase, and followed by a colon.

a) *Quaternary headings*: Quaternary headings are identical to tertiary headings, except that they are indented two ems instead of one em, lowercase letters are used as labels, and only the first letter of the heading is capitalized.

II. BODY OF ARTICLE

This section contains the main body of the article. Equations within an article are numbered consecutively from the beginning of the article to the end.

Fig. 1: This is an example figure caption.

$$x = Y + Z. \quad (1)$$

Equation numbering should be consecutive, should appear flush right on line with the last line of an equation.

A. Figures and Tables

All first citations of figures and tables in the article must be in numerical order. Citations to figures in text always carry the abbreviation “Fig.” followed by the figure number, for example, Fig. 1.

The general style for table captions is such that each caption number should be centered above the table with the label TABLE and the enumeration given in Roman numerals.

TABLE I: Table Example

Header 1	Header 2	Header 3
Row 1 Col 1	Row 1 Col 2	Row 1 Col 3
Row 2 Col 1	Row 2 Col 2	Row 2 Col 3

B. Citations

The numbering of references is employed by citing one reference per number, for example [1]. Every reference in a Transactions reference list should be a separate number entry. Use of one reference number to designate a group of references is not permitted.

III. CONCLUSION

The conclusion goes here. It should summarize the main points of the thesis and provide final thoughts or directions for future work.

APPENDIX A PROOF OF THEOREM

Appendix headings are a special case. The primary heading(s) in the Appendix or Appendixes are set according to the usual style, except that there is flexibility in the enumeration of the heading. Roman numerals as heading numbers (Appendix I) or letters (Appendix A) are acceptable. The Appendix is not preceded by a Roman numeral.

ACKNOWLEDGMENT

The placement of the Acknowledgment appears after the final text of the article, just before the References and after any Appendix(es). The spelling of the heading for the Acknowledgment section is always singular, with no “e” between the “g” and the “m.” As noted previously in the Text Headings section, the Acknowledgment head is a primary heading. Do not enumerate the Acknowledgment heading.

YOUR NAME Biography text here. The biography begins with the author’s full name and IEEE membership history. The first paragraph may contain a place and/or date of birth, next the educational background is listed. The second paragraph lists military and work experience. The third paragraph begins with the author’s title and last name, and lists memberships in professional societies, awards, and work for IEEE committees.
