4	Conclusion	3

1 Introduction

This is a sophisticated LaTeX template designed for programming assignments. It features code highlighting, clean typography, and a professional layout.

1.1 Features

- Custom code listing styles using `listings`.
- Clean headers and footers using `fancyhdr`.
- Professional title page.
- `mathpazo` and `helvet` fonts for a modern look.

2 Code Demonstration

Here is an example of Python code formatting:

```
1 def hello_world():
2     # This is a comment
3     print("Hello, World!")
4     return True
5
6 if __name__ == "__main__":
7     hello_world()
```

Listing 1: Example Python Code

And here is some C++ code:

```
1 #include <iostream>
2
3 int main() {
4     std::cout << "Hello, World!" << std::endl;
5     return 0;
6 }
```

3 Mathematics and Logic

Note

We can use custom boxes for important definitions or notes.

The template supports standard math environments:

$$\sum_{i=0}^n i^2 = \frac{n(n+1)(2n+1)}{6} \quad (1)$$

4 Conclusion

This template provides a strong foundation for technical reports and programming documentation.
